

# How much technical analysis do we need in planning for large freeway and interchange projects?

**Transportation Connects Alberta**

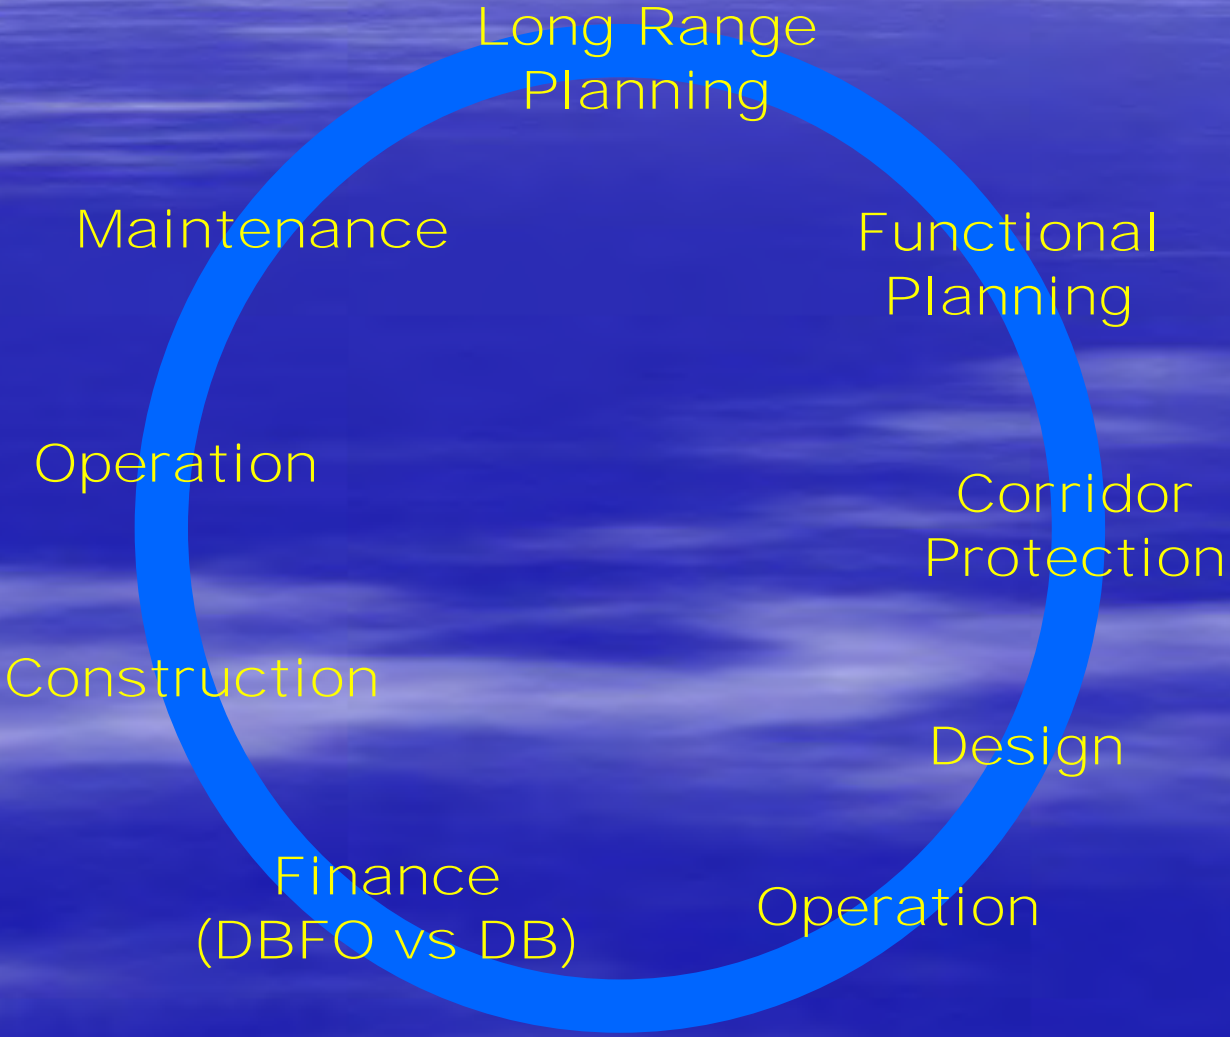

March 10 - 12, 2024

Edmonton Convention Centre

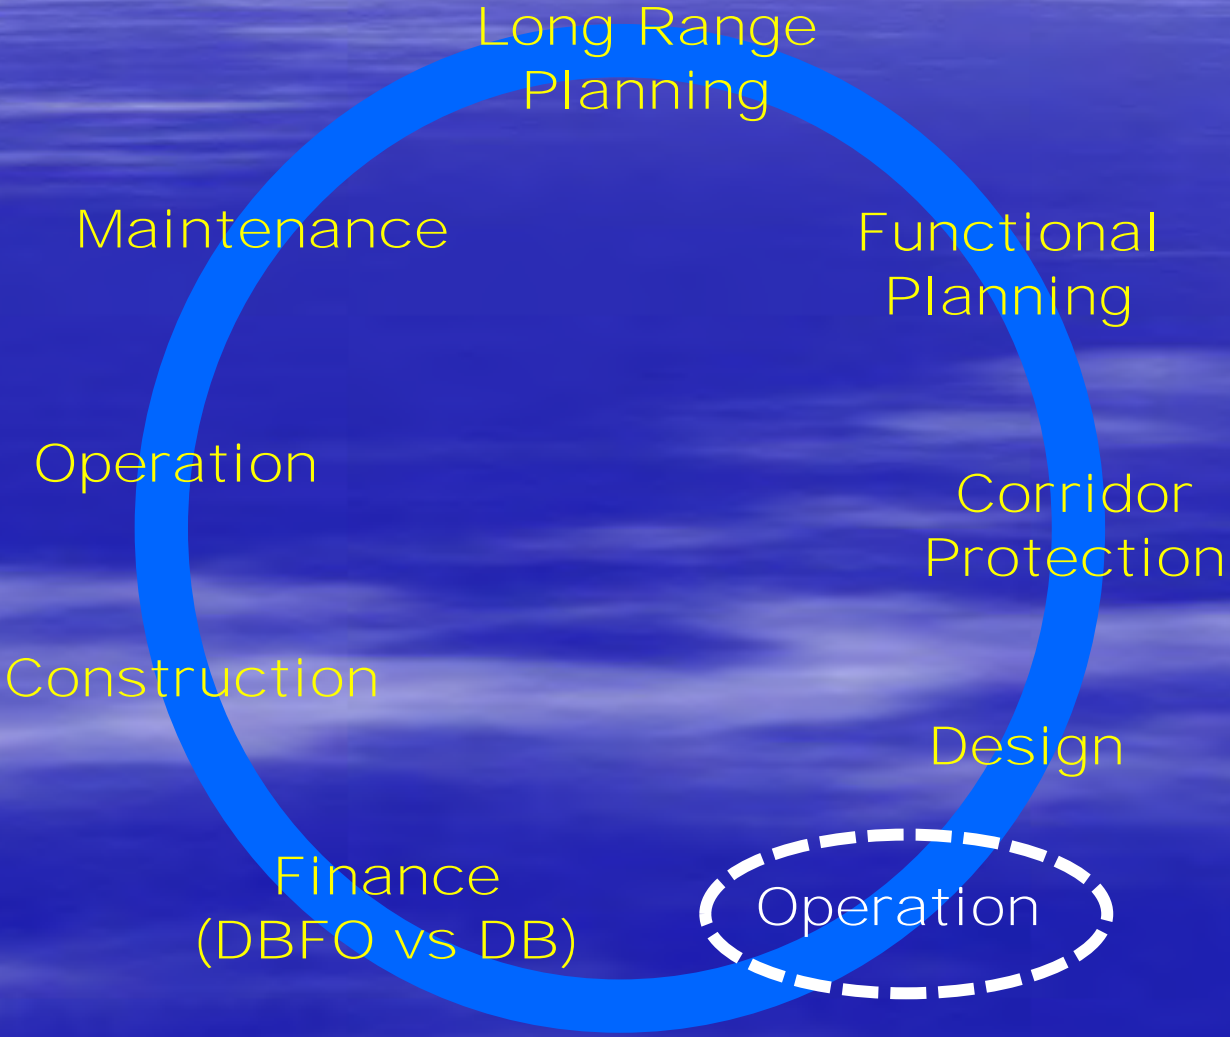

Paul Chan, P.Eng, M.Sc.

# How much technical analysis do we need in planning for large freeway and interchange projects?

# How much technical analysis do we need in planning for large freeway and interchange projects?

**How much technical analysis do we need in planning for large freeway and interchange projects?**

**Operation:**

**Freeway Analysis**

**Interchange Operations**

**How much technical analysis do we need in planning for large freeway and interchange projects?**

# Operation:

**Freeway Analysis**

**Interchange Operations**

**Comprehensive Interchange Operation Analysis Program**

By

Paul Chan, P.Eng. M.Sc.

Investec Consulting Ltd.

**March 12, 2024**

**This presentation** will provide a glimpse on the amount of **operational analyses** carried out to provide a comprehensive assessment on **service interchanges**

# Originally developed

- **15 years or so ago**
- **Alberta Transportation - Major Capital Planning, Major Capital Projects Branch**
  - **SE AHD, NE AHD, NW AHD, SEST, NEST, Deerfoot Tr Projects**
    - Jarret Berezanski, P.Eng., (retired)
    - Stan Turner, P.Eng., (retired)
    - Julian MacDonald, P.Eng., (Highway Planning Specialists)
    - Richard Reid – Senior Traffic Consultant, Traffic Solutions / Invistec
      - **Owner's Engineer**
      - ISL Engineering
      - CH2M Hill
      - UMA / AECOM
      - Traffic Solutions
  - **2006 ITE Banff Conference Presentation**

# Program Limitations

- **What needs to be upgraded?**
- **Who will upgrade it?**
- **WIP**
  - Paul Chan, Richard Reid
  - Julie Saunders, Emma Poon - UoA Co-Op Students
  - Darren Mackie, Darren Wong – Invistec Consulting
  - UoA Transportation Engineering Capstone Project (Graduating students)

# Introduction

- **Freeways and interchanges are expensive to build and upgrade**
  - A simple diamond interchange can easily cost over \$20-\$30 Million
  - More complex interchanges can cost well over \$100 Million
- Therefore, when planning for freeways and interchange facilities, considerable efforts should be expended to ensure that the investments will be spent in the most cost-effective manner
- Optimal Design - not over-built, not under-built

# Service Interchanges

- Freeway - Arterial
- Cost: Bridge Cost \$3,500/m<sup>2</sup> - \$5,000/m<sup>2</sup>
- Interchange analysis is complex
- High turn volumes, turn bay storage, proximity of ramp intersections, impact of signal coordination or lack thereof, trucks
- Analysis: Deterministic vs Stochastic Models
- Needs traffic simulation for interchange with signalized ramp intersections
- Many interchange types, many lane combinations
- Time Consuming
- Quite tedious

# Service Interchanges Types

- Diamond – tight diamond, single-point diamond, split diamond
- Partial Cloverleaf - Parclo A2, A4, B2, B4, AB, BA
- How many simulation scenarios can you model?
- Pre-screening

# Interchange Analysis Scenarios

- Horizon 1 - AM, PM
- Horizon 2 – AM, PM
- Horizon 3 – AM, PM
- All these for just 1 interchange type and 1 laning combination
- There are multiple interchange types and multiple laning combinations that should be compared

- What if the traffic forecasts are not quite precise? Or not accurate? (land use)
- What if future traffic volumes are actually 20% higher? Or lower?
- What if we have to replace / upgrade / modify the lowest cost interchange after 10, 15 years - are we better off to build a more adequate interchange in the beginning ?

Many questions that need to be answered before an interchange is planned, designed and build

We have developed, through past projects, an exhaustive and highly powerful service interchange planning level analysis program

It can analyze multiple interchange types at the same time

It can analyze multiple lane configuration combinations

It can analysis the % Capacity Utilization or LOS of over 1,000 scenarios of multiple interchange configurations and lane combinations instantly

# Example of interchange types that can be analyzed

## - Parclo A

# Example of interchange types that can be analyzed

## - **Parclo B**

# Example of interchange types that can be analyzed

## - Diamond

## - Hybrid

# Other Interchange Types

## Systems Interchange

# Other Interchange Types

## Diverging Diamond

# Other Interchange Types

## - Other places

**- Then there are these...**

**Chongqing, China (17.8M)**

**Takaosan Interchange (12-way),  
Tokyo (31.2M)**

# Assessed / planned 71 Interchanges

## of which

- Systems : 14 (20%)
- Diamond : 9 (13%)
- Split Diamond: 2 (3%)
- Parclo A: 21 (30%)
- Parclo B: 6 (8%)
- Parclo AB: 5 (7%)
- Hybrid: 7 (10%)
- Trumpet: 4 (6%)
- Cloverleaf: 2 (3%)
- Diverging Diamond: 1 (1%)

---

- Directly Applicable: 48 (67%)
- Partially Applicable: 18 (34%)

---

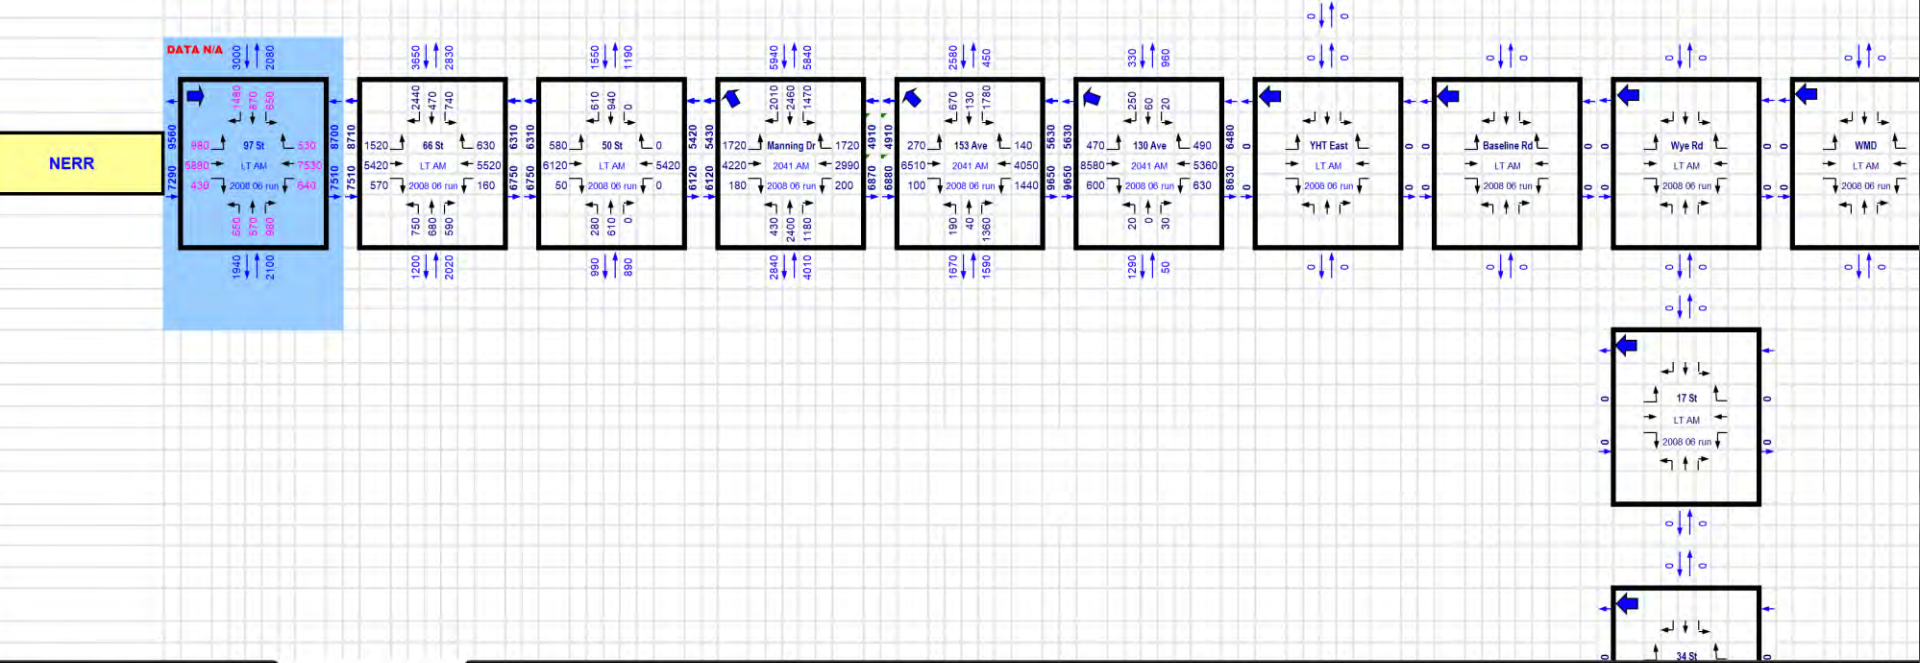

- TOTAL: 66 / 71 (93%)

Interchanges Assessed / Planned :
